

Anti-Microbial Coatings

Problem:

Transmission of Communicable Diseases

As in all public areas, playgrounds can be a place where children transfer bacteria that may cause/carry communicable diseases. As a leading playground equipment manufacturer, we're doing our part to help defend kids against the spread of germs and the risk of disease transmission

Solution:

Mira-Cote® by Miracle® Anti-Microbial Coatings for posts, rails, climbers and swing frames contain a compound that inhibits the growth of bacteria that may cause diseases. These coatings cover gripping points on play structures – places where kids hands touch most frequently.

Our proprietary anti-microbial treatment helps protect your children and your playground from bacteria and the wide range of problems that germs can create.

Features & Benefits

- Minimizes growth of bacteria, fungus and algae on equipment surfaces
- Helps reduce odors and stains on play components
- Works to make playground surfaces and equipment resistant to mold and mildew
- Assists in keeping playgrounds looking attractive
- Ten color choices (see below)
